

Qualification should not disappear into a score.

A prospect should not become “qualified” because a black-box number says so.

THE FAILURE MODE

BLACK-BOX SCORE

87 / 100

VISIBLE DECISION

QUALIFIED

The score hides the reason. The Day 11 workflow exposes the evidence, the rule, the status, and the next step.

Question: Can the decision be explained from the evidence already on the record?

Four explicit fields. No hidden score.

The workflow is intentionally narrow so every decision path stays inspectable.

FIT

Does this prospect match the defined target?

NEED

Is a relevant need explicitly demonstrated?

TIMING

Is the need active now or soon?

NEXT STEP

Is there a concrete next action?

Decision rule

Explicit evidence in → deterministic status out. Missing facts are never invented.

Three outcomes. Every one has a reason.

The workflow fails safely to REVIEW when evidence is incomplete or contradictory.

QUALIFIED

Fit = yes · Need = yes · Timing = now/soon · Next step exists

Proceed with the visible next step.

DISQUALIFIED

Explicit fit/need failure or timing outside the active window

Preserve the exact disqualification reason.

REVIEW

Missing, invalid, or contradictory evidence

Stop and require human review instead of guessing.

Synthetic cases exercise every decision path.

The proof is not a promise of sales performance. It is evidence that the workflow behaves deterministically.

SYNTHETIC PIPELINE SNAPSHOT

PROSPECT	OWNER	STATUS	REASON
Northstar Field	Jordan	QUALIFIED	Evidence supported
Pine & Main	Casey	DISQUALIFIED	Fit not met
Vertex Home	Avery	REVIEW	Timing unknown

Export proof CSV preserves the prospect, status, and visible reason from the filtered view.

TESTED: QUALIFIED · DISQUALIFIED · REVIEW

What this release does — and does not — claim.

The boundary is part of the proof. Day 11 is a workflow demonstration, not a business-outcome claim.

IT DOES

- Expose qualification criteria
- Show disqualification reasons
- Route missing evidence to REVIEW
- Export status + reason
- Use synthetic demo records

IT DOES NOT

- Predict who will buy
- Claim higher conversion or revenue
- Connect to a CRM or enrichment source
- Replace human judgment
- Claim regulated-data readiness

That is not the claim.

Challenge the workflow, not the marketing.

Compare the explicit decision path with your own qualification process.

INSPECTION CHECKLIST

- 1 Can you see the evidence used?
- 2 Can you explain why the status was assigned?
- 3 Does missing evidence stop the workflow?
- 4 Does a disqualification keep its reason?
- 5 Can the result be exported without changing the logic?

Inspect the product. Challenge the reasoning.

Day 11/30 · One bounded qualification workflow · One inspectable decision path · One verified release.
